	Boiler for solid fuel package	80
	Air conditioning package	80
	Fencing projects	140
	Septic tanks sealed package	bezpł.

Albatross house plan is an easy to build, inexpensive house with usable attic for the family of 4-5 people. The body of building was designed on a rectangular plan. Attic is topped with a symmetrical gable roof. This project is a connection of the economic and functional solutions, with a modern and interesting aesthetics of the building. Albatross is a classic house with an attic and a gable roof that can be easily build by any contractor, and also has this "something": interestingly selected materials, good proportions, the right size of the windows, and above all - functional, reasonably planned interior. Ground floor of house, the living room, with a comfortable living room, central hall with ornate staircase, kitchen partially open to the living room and an extra room - study or guest bedroom and the economic part of the house i.e. garage and boiler room. On the attic, thanks to the high elbow walls three are spacious bedrooms, including a parents' bedroom with a separate bathroom and a dressing room. In addition, there is provided a place for laundry - possibly storage. Despite of a small area house plan Albatross is spacious and comfortable house that will provide luxury conditions for life, even for a large family. Energy efficiency solutions - good insulation, compact shape of the building - allow to reduce future exploitation costs, and the simple construction of house ensures less stress during construction. Albatross house plan is also available in a mirror version.
